Critique of Political Economy – Moishe Postone and Sirohi with Soviet Marxism on Integrated Method

By Shomit Sirohi

Introduction

By Moishe Postone

In fact then the young Jewish scientist Shomit Sirohi is proving that first I integrate capital and Marxism to in fact commodities, and commodity-forms and money and money as culture and mediations to inventions of notes, and stamps in Jewish experience – this then is called science – he proves it is musical like Soviet Union with a sharp bias though to science in

biology, physics and mathematics even astronomy – he means just as I am arguing like A Draft the music works out – “a certain sociology of inventions and dynamics in commerce also exists.” I thank him for my Nobel Prize – it works for Jewish experiences that a Hebrew watch proves our lives and our spiritual lives and time and temporality – our shared project. We are even claiming it is two-sided categories of base and superstructure with several mediations which is the problem of complex science and proofs we are being told to write as a Jewish scientific experience – it proves on another note “coffee plantations, labour, wage and dynamic profits which then produces labour dynamics and social dynamics is then also in fact a companies trade results which create a dynamic

innovative company-form on branding and this is then about innovations which is how it innovates and is creative.” This means that a table proves Messianic things – we give this in a table on plantations (unit) and company trade (whole) which though is mediated by a form called abstract time in American and single level of abstraction in the world of coffee plantations and creative dynamics coming from say Starbucks – which then proves the thesis it is true that science and humanities are two languages of the same experience called Jewish company-forms in Israel. We thank you.

I. A, B, C on Soviet Marxism and Scientific Stances

A, it is all scientific in different ways, B – it is complexly integrated like music, C – what economics calls commodities, Judaism calls inventions, and in fact America calls inventions of software works, and sociology calls inventions which are worth a fortune and run a transaction in fortunes and monetarism.

II. Moishe Postone and Sirohi

So in fact it is integrated – Postone

It is integrated like Music – Sirohi.
